CALIBRATION

Valid until: November 30, 2020

Certificate Number: 3601.02

In recognition of the successful completion of the A2LA evaluation process, accreditation is granted to this laboratory to perform the following calibrations<sup>1, 9</sup>:

I. Dimensional

Parameter/Equipment	Range	CMC <sup>2, 4, 6, 8</sup> ( $\pm$ )	Comments
Micrometers	Up to 12 in (12 to 40) in	(21 + 1.2L) $\mu$ in	Grade 0 gage blocks
Calipers	Up to 40 in	(29 + 1.4L) $\mu$ in	Grade 0 gage blocks
Length & Travel Indicators	Up to 6 in	60 $\mu$ in	Grade 0 gage blocks, Starrett grade AA granite surface plate
Micrometer Standards	Up to 10 in	(28 + 2.2L) $\mu$ in	Grade 0 gage blocks Pratt & Whitney Supermicrometer™

<sup>1</sup> This laboratory offers commercial calibration service and field calibration service.

<sup>2</sup> Calibration and Measurement Capability Uncertainty (CMC) is the smallest uncertainty of measurement that a laboratory can achieve within its scope of accreditation when performing more or less routine calibrations of nearly ideal measurement standards or nearly ideal measuring equipment. CMCs represent expanded uncertainties expressed at approximately the 95 % level of confidence, usually using a coverage factor of  $k = 2$ . The actual measurement uncertainty of a specific calibration performed by the laboratory may be greater than the CMC due to the behavior of the customer's device and to influences from the circumstances of the specific calibration.

<sup>3</sup> Field calibration service is available for this calibration and this laboratory meets A2LA R104 – *General Requirements: Accreditation of Field Testing and Field Calibration Laboratories* for these calibrations. Please note the actual measurement uncertainties achievable on a customer's site can normally be expected to be larger than the CMC found on the A2LA Scope. Allowance must be made for aspects such as the environment at the place of calibration and for other possible adverse effects such as those caused by transportation of the calibration equipment. The usual allowance for the actual uncertainty introduced by the item being calibrated, (e.g. resolution) must also be considered and this, on its own, could result in the actual measurement uncertainty achievable on a customer's site being larger than the CMC.

<sup>4</sup> The stated measured values are determined using the indicated instrument (see Comments). This capability is suitable for the calibration of the devices intended to measure or generate the measured value in the ranges indicated. CMC's are expressed as either a specific value that covers the full range or as a percent or fraction of the reading plus a fixed floor specification.

<sup>5</sup> In the statement of CMC, percent is to be read as percent of reading.

<sup>6</sup> Granite Surface Plate calibration is limited to Local Area Flatness, not Overall Flatness.

<sup>7</sup> The type of instrument or material being calibrated is defined by the parameter. This indicates the laboratory is capable of calibrating instruments that measure or generate the values in the ranges indicated for the listed measurement parameter.

<sup>8</sup> In the statement of CMC, *L* is the numerical value of the nominal length measured in inches.

<sup>9</sup> This scope meets A2LA's *P112 Flexible Scope Policy*.
